*How JLC-Tech can help your workplace project*

## LIGHTING THAT BOOSTS PRODUCTIVITY

JLC-Tech's products deliver an enhanced lighting performance. They replace the cross tees in a suspended ceiling, becoming an integral part of the ceiling structure. Due to their unique integration, they create a clean, uniform ceiling with uninterrupted panels and uniform illumination throughout an office. The consistent light levels create an inviting ambiance and productive atmosphere for employees.

## IMPROVED INDOOR ENVIRONMENTAL QUALITY

JLC-Tech's structurally integrated lighting requires minimal to no modification to the ceiling, maximizing its ability to absorb sound, reflect light, and improve indoor air quality – key factors for promoting the health and wellness of the people occupying the space.

## EASY-TO-ACCESS CEILING PLENUM

Office ceilings can be crowded with utilities such as HVAC, sprinkler systems, AV and projectors. JLC-Tech's products replace the grid in a ceiling, leaving space above and around the ceiling plane completely unoccupied and easy to access for maintenance.

## ENERGY AND COST SAVING

JLC-Tech's energy-efficient LED lighting is designed to dissipate heat away from the aluminum chassis, extending product lifespan and performance. Designed to integrate seamlessly into the ceiling, the fixtures also reduce labor costs and installation time.

## SUPPORT VISUAL COMFORT AND UGR REQUIREMENTS

Lighting plays a crucial role in visual comfort within the workplace, directly influencing productivity and overall well-being. JLC-Tech products provide a range of optical solutions designed to meet UGR requirements and enhance comfort. Options include direct/indirect lighting, fully indirect lighting, and our Vista Comfort® lens.

## GUARANTEEING AS-SPECIFIED RESULTS

JLC-Tech's sustainably designed products replace existing building elements, simplifying integration and installation while preserving the original design intent and on-center aesthetic.
