

GiRO™

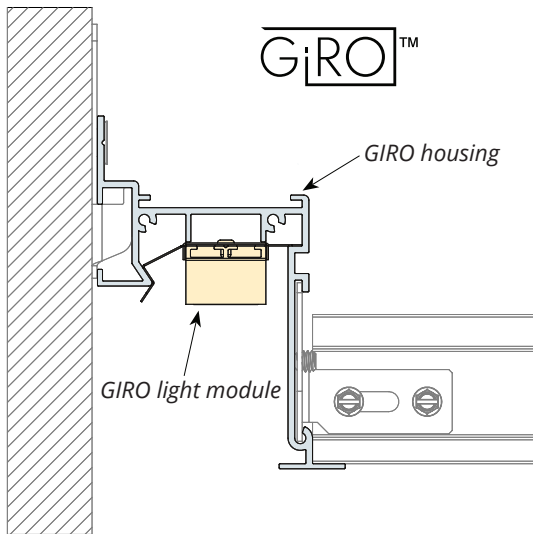

Perimeter Lighting Solution

JLC • tech

Structurally Integrated Lighting

GIRO, the first and only structural perimeter light fixture to fully integrate into a ceiling assembly!

Unlike typical perimeter lighting, the housing for GIRO is installed while the ceiling is constructed; GIRO's light module then snaps in after the ceiling is assembled. The innovative QuietCorner™ optic softens light at inside corners ensuring a consistent light level throughout. This elegant and seamless design allows for a smooth transition from the ceiling to the wall without additional ceiling components.

Compatible with any ceiling type, GIRO offers an efficient solution for perimeter lighting. Guaranteeing specification, simplifying installation, and reducing waste, GIRO provides a lighting solution like no other!
